MARKET FOCUS

Company Overview

Motikisi Engineering and Projects is a South African construction contractor and engineering project partner delivering civil works, building works, mining infrastructure and industrial site activities. We undertake work as a principal contractor or specialist subcontractor and combine practical construction capability with disciplined project governance.

Our construction-led approach covers mobilisation, site establishment, procurement, labour and plant coordination, subcontractor management, execution, inspection, commissioning support and handover. Clients benefit from one accountable team focused on safe production, quality workmanship, programme certainty, cost awareness and measurable delivery.

Registered name	Motikisi Engineering and Projects
Registration number	2022 / 891713 / 07
Founder & Director	Tshepo Malebana
Business address	64 Burger Street, Polokwane, 0700

Our Mission

To deliver safe, dependable and professionally managed engineering and construction solutions that create lasting value for clients, communities and project stakeholders.

Our Vision

To grow into a trusted South African engineering and construction partner recognised for field capability, quality delivery, local participation and responsible business practice.

Construction & Project Management Leader

Mining and infrastructure delivery

14+ years of progressive industry experience

Nelson Tshepo Malebana is a civil engineering and project delivery professional with progressive experience spanning consulting engineering, site management, construction management and project-specialist roles. He currently serves as a Project Specialist in the mining sector, bringing disciplined planning, stakeholder coordination and governance insight to Motikisi.

His portfolio includes water and sewer reticulation, roads, stormwater systems, potable-water pipelines, mining facilities, overhead powerline upgrades, industrial yards, employee facilities and plant-support projects. His strengths include feasibility support, design reviews, procurement, contract administration, budget and schedule control, quality assurance, MHSA/OHS compliance and project close-out.

Leadership Credentials & Delivery Depth

SAFE, PROFESSIONAL DELIVERY

CAREER PROGRESSION	SELECTED PROJECT EXPOSURE
Civil Technician Engineer's Representative Site Manager Construction Manager Project Specialist	Water and sewer reticulation Roads and stormwater infrastructure Potable-water pipelines Mining and industrial facilities 11kV and 33kV overhead lines Employee and community facilities
PROJECT CONTROLS	COMPLIANCE & GOVERNANCE
Scope, programme and budget planning Procurement and bid adjudication Progress reporting and payment certification Stakeholder and contractor coordination	MHSA and OHS-aligned execution Risk assessments and method statements Quality assurance and inspections Document control and close-out reviews

Leadership Value to Clients

This combination of technical grounding and senior project experience enables Motikisi to engage confidently with clients, consultants, contractors and local suppliers—from feasibility and design review through construction monitoring, commissioning support and close-out.

Core Values

SAFETY	PROFESSIONALISM	QUALITY
People, compliance and responsible site practice.	Clear communication, integrity and accountability.	Disciplined controls and dependable workmanship.
DELIVERY	DEVELOPMENT	PARTNERSHIP
Practical progress and reliable execution.	Local participation and SMME growth.	Collaborative, client-focused relationships.

Services

01

Civil Engineering

Roadworks, earthworks, drainage systems, pipeline infrastructure and site preparation delivered with precision and a strong safety focus.

02

Construction Contracting

End-to-end civil, commercial and industrial construction delivered as a principal contractor or subcontractor, including mobilisation, site establishment, labour and plant coordination, procurement, execution and handover.

03

Construction Management

Hands-on management of site teams, subcontractors, programme, cost, quality, safety, contract administration, progress measurement, change control, reporting, commissioning support and close-out.

04

Project Management

Planning, coordination, supervision and delivery support designed to keep projects compliant, on programme and within budget.

05

Mining Support

Engineering and infrastructure support tailored to mining, heavy-industry and operational site environments.

06

Local SMME Development

Support for local enterprises through subcontracting opportunities, supplier participation, skills transfer, mentoring and project-readiness development.

Construction Contracting Capabilities

Motikisi is structured first and foremost as a construction contractor, supported by strong engineering and project-management capability. We can take responsibility from pre-construction planning and site establishment through procurement, execution, supervision, cost and programme control, commissioning support and close-out, either as principal contractor or subcontractor.

CONSTRUCTION DELIVERY	CONSTRUCTION MANAGEMENT
Site establishment and mobilisation Roadworks, earthworks and drainage Pipelines and water infrastructure Concrete and structural works Building and industrial works Plant, labour and material coordination Testing, snagging and handover	Construction planning and sequencing Subcontractor and supplier management Cost, cash-flow and change control Programme and productivity monitoring Quality inspections and assurance Safety and regulatory compliance Progress reporting and close-out

Health, Safety & Quality

Motikisi promotes a safety-first work culture supported by planning, supervision, communication and compliance awareness. Quality is managed through clear scope understanding, workmanship controls, inspection, progress monitoring and accountable project coordination.

How We Deliver

Our delivery approach is built around disciplined planning, clear accountability and active communication. The process is scaled to suit the contract, client requirements and project environment.

COMPLEX CONSTRUCTION COORDINATION

01 UNDERSTAND	Confirm scope, stakeholders, site conditions, constraints and measurable outcomes.
02 PLAN	Develop resources, sequencing, safety considerations, quality controls and reporting requirements.
03 MOBILISE	Coordinate people, suppliers, subcontractors, equipment and site-readiness activities.
04 EXECUTE	Deliver the works with active supervision, communication and disciplined field control.
05 MONITOR	Track quality, safety, programme, contractor performance and emerging project risks.
06 CLOSE OUT	Complete inspections, resolve outstanding items, organise records and support handover.

Project Controls & Stakeholder Engagement

Depending on the appointment, controls may include progress measurement, site records, inspection tracking, quality observations, contractor coordination, issue escalation, change awareness and structured client reporting. We engage professionally with clients, consultants, contractors, communities, local suppliers and project teams to manage expectations and resolve issues early.

Project Experience

A visual record of practical field exposure across pipeline, civil, mechanical and structural construction environments.

Pipeline installation works

Large-diameter piping, structural preparation and industrial site execution.

Civil and mechanical support

On-site lifting, pipe placement and heavy-duty installation support.

Foundation and structural works

Reinforced concrete execution and construction site preparation activities.

Local SMME Development

Motikisi recognises the role of local enterprise participation in building inclusive and sustainable project value chains. Our Local SMME Development service supports practical participation by qualifying local businesses.

- Subcontracting and supplier-participation opportunities.
- Project-readiness guidance and onboarding support.
- Skills transfer, mentoring and practical exposure.
- Performance monitoring and constructive feedback.
- Collaboration on local participation objectives.

SMME Development Framework

IDENTIFY Suitable work packages	PREPARE Readiness and onboarding	SUPPORT Mentoring and skills transfer	REVIEW Performance feedback
